

IDEALFORM ACRYLIC BATHS

Installation Instruction

TECHNICAL INFORMATION

Section X - X

Fig. 1

Fig. 2 centres of leg adjusters

All dimensions shown in millimetres.
Dimensions shown may vary within permitted tolerances.

BATH CONDITION

Before commencing installation, carefully remove packaging/protective film and check for damage. If damaged, report immediately to supplier.

The bath should be fully protected during the installation process.

Fig. 1 illustrates baths fitted with rigid panels (except baths with wooden panel option. - see Installation Instructions supplied with wooden panels).

Appropriate safety equipment/workwear should be used

TABLE 1

[illegible]

INSTALLATION

1. Lay bath face down and remove legs and bags containing feet etc. (Note: Tonic waste is boxed separately.)

The 4 black - No. 8 x 40 long countersunk crosshead self tapping screws removed from the bath are NOT REQUIRED.

2. Locate leg adjusters on bath frame and mark positions for the fixing screws. Note: If fitting wooden panels, locate outside face of leg adjuster flush with outside face of frame. Pilot drill the holes in the bath frame and fix leg adjusters to frame.

3. Locate bath legs in leg adjusters and mark positions for the fixing screws on the base board. Pilot drill the holes in the base board, to a depth of 6mm maximum. Position legs in leg adjusters and on base board and secure. Locate No. 8 x 12 long pan head self tapping screw into leg adjuster and tighten.

DO NOT OVER TIGHTEN.

4. Locate centre support bracket, mark screw hole positions, pilot drill holes in base board, to a depth of 6mm maximum, and secure bracket.

5. Fix the feet and adjust to give approximate floor to top of rim height. Trial fit the panel(s) to verify height is correct.

Note: *Untrimmed panel fitment requires the maximum height adjustment (Cmax Fig1). Remember to allow for floor covering thicknesses and uneven floors.*

6. Tonic Only. Fit support leg end cap to front member of wooden frame in position shown (Fig. 3).

7. Fit supply and waste fittings. If the bath is to be installed with a monoblock mixer a special hole (or holes) is required to accommodate the mixer and will have to be cut by the installer in an appropriate position on the rim of a no tap hole bath to suit the bathroom layout. Full details or a template for cutting the hole (or holes) is supplied with monoblock fittings. A template for cutting two tap holes in a no tap hole bath is supplied with the bath. Cut tap holes, and fit supply fittings, waste, overflow and trap. When using a monoblock fitting, the area directly behind the pop-up waste mechanism should be avoided.

Fig. 3

8. Fit hand grips (where supplied)
See Figs. 4 & 5. Use appropriate mounting method.

Fig. 4

Fig. 5

9. Fix the two wall fixing brackets to bath frame as indicated in Fig. 6. Pilot drill holes in frame before fixing brackets.
Note : If wall bracket fitment is not possible, then the use of wooden battens is recommended for rim support.

10. Fix bath to wall (Fig. 6)

11. Fix bath to floor and ensure that all nuts are tight.

12. (Tonic only) Fit support leg and adjust foot to correct height. (Do not force the rim upwards). The foot can be screwed to the floor for extra stability if required. Tighten locking nut.

13. Connect services, test for satisfactory operation of fittings and ensure there are no leaks.

14. Tile down to the height of the bath rim leaving a 3-4mm gap for waterproof sealant, see Fig. 6. An extruded sealing strip can be used for the bath to wall joint as an alternative to waterproof sealant. Protect bath during tiling and uneven floors.

WARNING

DO NOT fix hand grips in any oil based bedding compound or putty.
These materials contain solvents which will damage the hand grips irreparably.

Fig. 6

15. FIT PANEL(S)
Refer to Table 1 for panel type

PANEL TYPE 'A'
UNILINE PANELS

16. Fit panel(s)
Attach the lengths of PVC cushioning strip to the top edge(s) of the panel(s) (three on the front panel and two on the end). Fit

panel(s) (end panel first where appropriate) by pushing the top edge under the bath rim, Fig. 7.
17. Panels can be reduced in height by cutting a strip from the bottom edge, for heights see Fig. 1. Timber floor batten and wall battens are not supplied but are necessary to secure the panels. Screw battens to the floor/walls. (Battens should be square edged wood)

Fig. 7 TYPE 'A' PANELS

PANEL TYPE 'B'

End panels must be fitted before front panels. Hercules 800 end panels will need to be trimmed if fitting to 750mm wide baths. (See Fig. 8 for abutment cut out).

Universal 2 front panel may be installed with feature line at top or bottom. Hercules front panel to be installed with feature line closest to the floor.

Ensure that the bath is fitted and levelled to the correct height (see table), measured from the floor to the top of the bath roll.

Drop a plumbline from the corner of the bath and mark the floor corresponding to the outline of the bath.

Fig. 8

From this line measure back:

1. 8mm for the Universal front panels
2. 12mm for Hercules front panels
3. 40mm Jasper Morrison front panel
16mm Jasper Morrison end panel

Screw retaining clips, evenly spaced onto the wooden frame behind the bath roll.

Insert top of the end panel between the bath roll and retaining clips and push the bottom of the panel against the floor and wall battens, Fig. 9.

Repeat procedure for the front panel.

When both panels are correctly positioned, in relation to the bath's corners, secure panels to battens.
