

**A4556AA**  
**HYDRO PURGING KIT FOR MARKWIK MIXERS**  
**QUICK REFERENCE USER GUIDE**

*Armitage  
Shanks*

**1. IMPORTANT**  
**CLEAN PIPES USING THIS PURGING KIT**  
**BEFORE OPERATING MIXER.**

A4556AA Purging Kit. Designed for flushing out debris from new pipe-work after installation. (Ensure 2 o-rings are fitted to each chromed part.)

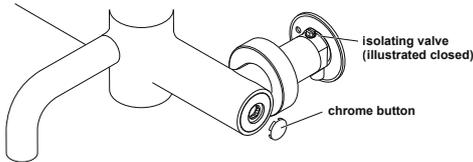

**2.** For use with Markwik Thermostatic Mixers:

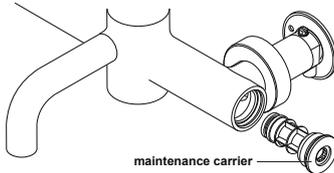

Note: for illustration purposes, Markwik panel mount lever operated product is shown.

**3. IMPORTANT:** Ensure both **HOT & COLD** water supplies have been isolated. This can be done using isolating valves fitted behind the shrouds/shields of the mixer. Refer to appropriate section of the mixer installation booklet. (Note: Markwik deck mount isolation is below basin).

**4.** Carefully prise out chrome button from end of mixer. **COLD** side of mixer.

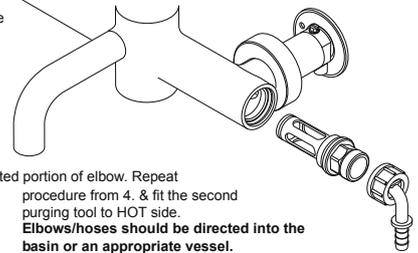

**5.** Use 10mm Allen Key to unscrew "end cap" & withdraw complete "maintenance carrier" assembly from maintenance port. (Expect some water trapped inside mixer to escape.)

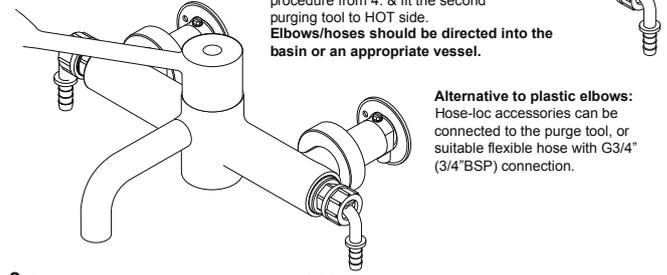

**6.** Fit one purging tool directly into the maintenance port. Hand tighten to shoulder or use 24mm open end spanner.

**DO NOT OVER TIGHTEN.** Screw plastic elbow assembly provided onto purge tool.

**7.** Push fit a suitable hose onto serrated portion of elbow. Repeat procedure from 4. & fit the second purging tool to **HOT** side. **Elbows/hoses should be directed into the basin or an appropriate vessel.**

**Alternative to plastic elbows:** Hose-loc accessories can be connected to the purge tool, or suitable flexible hose with G3/4" (3/4" BSP) connection.

**8.** Open both isolating valves, allowing both **HOT & COLD** water to flow from the mixer through the purging kit and discharge through hoses into basin or vessel. Allow water to run for a few minutes, until no debris is visible in discharged water. **Avoid contact with hot water.**

**9.** Close isolating valves. Remove purging kit using reverse of fitting procedure. Check that the mesh filters/strainers of the maintenance carrier are clean before re-fitting. After refitting maintenance carrier, open isolating valves and check for leaks.

**10.** Continue with Operating & Commissioning procedure specified in mixer installation booklet.
